TENNISMATIC

The new *Tennismatic* T200 Championship series Ball Machine sets new world standard for it's portable machine class .

By using the latest embedded computer and LCD display technologies plus the most comprehensive software package, the result is a truly breathtaking piece of Aussie Made robot automation that will take your games to the highest level.

The new T200 series has all the features and control of the T100 series plus the advantage of having a larger/ faster microcomputer, a large back-lit LCD display, membrane touch panel and a real time clock which allows many revolutionary features to be realised.

Imagine you are coaching a group of students, and you want to allow each student to practice on a certain drill sequence for 10 minutes. Bingo, the machine will stop and beep at the end of the set time period and allow the next student to repeat the same drill.

Or if you are hiring the machine out for few days. No problems, just program it in, the machine will automatically stop working after the hiring period is expired. To start it up again, you will need to punch in your own PIN number

Oops, you have programmed too many favourites & drills and can't remember which one to use. No worries, simply preview the drill by activating the drill simulation on the LCD display, it will beep at the end of each drill sequence.

Also, each memory location once programmed is highlighted so you can easily tell how many are remain empty.

Those are just few features out of many others you won't find from other imported brands .

TENNISMATIC
